DETAILED ACTION

1. This application has been examined.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jain et al (6567980) and Takemoto (6335742).

4. Regarding claim 1, Jain et al show a GUI adapted to browse pictures stored in a picture database (column 2 lines 10-20, column 4 lines 20-35), including: a main level display providing links to other display levels (Figure 2), which has a main display area adapted to display pictures, thumbnails, and graphical browsers (Figure 2 element 172, element 202, column 4 lines 20-40), a picture content iconic region having icons representing pictures according to predefined content categories and picture metadata (Figures 14, 17, column 14 lines 27-65), a graphical browser region having indicia of graphical browsers utilized by the GUI (Figure 17) and further having a plurality of display levels linked to the main display level via one or more icons (Figure 17,

column 13 lines 1-33). Jain et al show a picture grouping iconic region indicating files containing pictures in a database (Figure 17) for picture grouping, but do not show this as being hierarchical with all the directories and folders. However Takemoto does have the hierarchical directory region (Figure 9 for example) for picture grouping. It would have been obvious to a person with ordinary skill in the art to have this in Jain et al, because it would allow a convenient way to group pictures.

5. Regarding claim 3, the content categories include picture capture data (Jain et al column 11 lines 50-65).

6. Regarding claim 4, the content categories include picture caption location (Jain et al column 13 lines 43-50).

7. Regarding claim 5, the content categories include predefined events (Jain et al column 7 lines 1-15).

8. Regarding claim 6, the content categories include persons (Figure 2).

9. Regarding claim 7, Jain et al and Takemoto do not specifically say the browsers are geograhic maps, but Examiner takes Official Notice that geographic maps may be displayed on

Art Unit: 2174

browsers. Furthermore, Jain et al do mention displaying Global Positioning data (column 7 lines 1-15). It would have been obvious to a person with ordinary skill in the art to have the geographic map in Jain et al, because it would provide a convenient way to display Global Positioning data.

10. Regarding claim 8, the browser may be a timeline (Jain et al column 6 lines 25-50).

11. Regarding claim 9, Jain et al and Takemoto do not specifically mention the scatter plot, but Examiner takes Official Notice that a scatter plot may be displayed. It would have been obvious to a person with ordinary skill in the art to have this in Jain et al, because it would provide a convenient way to display picture data.

12. Regarding claim 10, the browsers include people based graphical representations based on picture metadata (Figures 2, 17).

13. Claims 2, 11-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jain et al (6567980) and Takemoto (6335742) and Balogh et al (5493677).

14. Regarding claim 2, in addition to the aforementioned, Jain et al and Takemoto do not go into the details of displaying the search word indicia and word search area with methodologies,

Art Unit: 2174

but Jain et al do mention grouping and accessing pictures by metadata (aforecited passages). Furthermore, Balogh et al do show displaying the search word indicia and word search area with methodologies to group and access pictures by metadata (column 6 lines 45-67, column 7 lines 1-30). It would have been obvious to a person with ordinary skill in the art to have this in Jain et al, because it would allow convenient grouping and accessing pictures bu metadata.

15. Claims 11-18 show the same features as above and are rejected for the same reasons.

16. Regarding claim 19, Balogh et al show that these methodologies in fact include Boolean searches (column 7 lines 15-29).
